

Q235 Galvanised Mild Steel Angle For Structural Building galv steel angle

Our Product Introduction

for more products please visit us on galvmetal.com

Basic Information

- Place of Origin: Hebei, China
- Certification: ISO9001
- Minimum Order Quantity: Negotiable
- Price: Negotiable
- Packaging Details: According to customer needs
- Delivery Time: 15-30 work days
- Payment Terms: TT

Product Specification

- Technology: Hot Dipped
- Name: Angle Steel
- Material: Q235
- Shipment: Container Or As Your Request
- Application: Construction, Machinery, Shipbuilding, Etc.
- Surface: Mild Steel Plain
- Production Capacity: 5000 Tons Per Month
- Highlight: **q235 galvanised mild steel angle, structural building galv steel angle, q235 galv steel angle**

Product Description

Product Description:

Galvanized L-Angle Steel is a type of coated L-Shaped iron that is commonly used in construction projects. It is made of high-quality hot-rolled galvanized steel that has been processed through a hot-dip galvanizing technology. This process involves immersing the steel in a zinc bath, which results in a protective layer that provides superior corrosion resistance and durability.

The galvanizing process also ensures that the steel has a uniform coating, which makes it look more appealing and professional. The zinc coating is also thicker than other coatings, which makes it more durable and long-lasting.

Galvanized L-Angle Steel is available in various sizes and thicknesses, which makes it suitable for a wide range of applications. It is commonly used in construction, manufacturing, and engineering projects.

The quality of Galvanized L-Angle Steel is of utmost importance, which is why it undergoes rigorous inspection before it is shipped. The inspection process ensures that the steel meets the required standards and specifications, and that it is free from defects and damage.

Features:

Excellent Anti-corrosion Performance

The galvanized layer uniformly covers the surface of angle steel through hot-dip coating process. This forms a dense metal protective layer that effectively isolates the angle steel from direct contact with oxygen and moisture present in the air. In turn, it greatly improves the corrosion resistance and rust resistance of the angle steel, even in harsh environments such as humidity, acidity, and alkalinity. This process can maintain long-term stable performance and extend the service life of the angle steel.

Enhance Structural Strength

Galvanizing treatment not only improves the anti-corrosion performance of angle steel but also enhances the overall mechanical strength of the angle steel through the combination of galvanized layers. The metallurgical bond between the galvanized layer and the base metal makes the angle steel more stable and reliable when subjected to external forces such as pressure and tension, making it suitable for various structural systems that require high-strength support.

Beautiful and Easy to Maintain

Galvanized angle steel has a smooth and bright surface, uniform color, and excellent decorative effect that can enhance the overall beauty of buildings. It reduces the workload and cost of later maintenance due to its excellent anti-corrosion performance and only requires regular cleaning to maintain its good appearance and performance.

Wide Applicability

Galvanized angle steel is widely used in various fields such as construction, bridges, power, communication, transportation, and manufacturing. It can serve as structural components, supports, connectors, and other various aspects of different industries according to their material performance, size, and shape required. Galvanized angle steel's good processing performance and weldability make it flexible and convenient to work with during the processing and manufacturing process.

Technical Parameters:

Production Capacity	5000 Tons Per Month
Surface Treatment	Galvanized
Name	Angle Steel
Quality	High Quality. Inspection
Application	Construction, Machinery, Shipbuilding, Etc.
Processing Services	Welding And Cutting
Material	Q235
Shape	L Shape
Edge Width	140mm, Customized
Technology	Hot Dipped

Applications:

The Galvanized Angle Steel is widely used in the construction industry, where it is used to provide structural support to buildings and other structures. It is also used in the machinery industry to manufacture different machinery components that require high strength and stability. In the shipbuilding industry, Galvanized Angle Steel is used to construct different parts of ships, including decks, hulls, and other structures.

Galvanized Angle Steel is of high quality and undergoes thorough inspection to ensure that it meets the required quality standards. The product is available in Mild Steel Plain surface, which makes it ideal for different applications. The product is made using Hot Rolled or Cold Rolled technology, depending on the intended use and application.

The Galvanized Angle Steel is highly versatile and can be used in different scenarios. For instance, the Slotted cold drawn angle steel is ideal for use in electrical power transmission towers, where it is used to provide structural support. Additionally, the Coated L-Shaped Iron is used in the construction of bridges, where it is used to provide support and stability to the bridge.

Packing and Shipping:

Product Packaging:

The Galvanized Angle Steel product will be securely packaged in a sturdy cardboard box to prevent any damage during transportation. The product will be wrapped in plastic to protect it from moisture and other environmental factors. The box will be labeled with the product name and details for easy identification.

Shipping:

The Galvanized Angle Steel product will be shipped using a reputable courier service to ensure timely and safe delivery. Shipping cost will be calculated based on the weight and destination of the package. The customer will be provided with a tracking number to monitor the progress of the shipment.

FAQ:

Q: What is Galvanized Angle Steel?

A: Galvanized Angle Steel is a type of steel product that has been coated with a layer of zinc to protect it from rust and corrosion.

Q: Where is Galvanized Angle Steel produced?

A: Our Galvanized Angle Steel is produced in Hebei, China.

Q: What certifications does Galvanized Angle Steel have?

A: Our Galvanized Angle Steel is certified by ISO9001, ensuring its quality and reliability.

Q: What is the minimum order quantity for Galvanized Angle Steel?

A: The minimum order quantity for Galvanized Angle Steel is negotiable. Please contact us for more details.

Q: What are the payment terms for Galvanized Angle Steel?

A: The payment terms for Galvanized Angle Steel are TT (Telegraphic Transfer) or negotiable. Please contact us for more details.

Q: What is the delivery time for Galvanized Angle Steel?

A: The delivery time for Galvanized Angle Steel is 15-30 work days, depending on the quantity ordered and other factors.

Q: What is the price of Galvanized Angle Steel?

A: The price of Galvanized Angle Steel is negotiable. Please contact us for a quote based on your specific needs and requirements.

Q: How is Galvanized Angle Steel packaged?

A: Galvanized Angle Steel is packaged according to customer needs. Please contact us for more details.
